

How to attract Women Along with Synthetic Pheromones

Pheromones in humans are chemical substances which are let go of through sweat from the body as a hint of **sexual attraction**. Even though these pheromones are made in the body but in the present age and time man has had the opportunity to make these pheromones artificially as well. There have been many trials and scientific studies to check when these artificial pheromones really work such as naturally occurring pheromones as well as their reports have revealed that these types of synthetic pheromones have actually got a very high effectiveness in bringing in the opposite sex. In this article we are going to explore more about these pheromones and how to use them effectively.

Different Types of Pheromones

There are basically two types of pheromones produced by a **human body**. One produced by the male body is called **androstenone** and also the other the one which is created in a woman's body is named copulin. They are basically both chemicals which happen in the body and act as messengers of lovemaking fascination. The more the body generates these chemicals higher the chances of attracting a potential partner. This particular recent scientific development have made people truly interested in donning synthetic pheromones.

Artificial Pheromones

Man made artificial pheromones generally have the same basic method and the difference lies in the quality of elements used. It is very important to use cologne that has a high percent of pheromones inside. These kinds of **pheromones** are not very cheap so you need to check up the products high quality and status carefully before going ahead with the purchase.
