

## Increase Pheromones For Sexual Attraction

**P**heromones are airborne chemicals which are emitted by humans and animals to attract the opposite sex or even the same sex for that matter if you are a gay or lesbian. It is now known that pheromones are detected through the Vomeronasal Organ (VNO) in the nose.

Researchers have found that all humans have two small openings on both sides of the hard divider in the nose. A group of cells are situated just at the rear of these types of holes. These cells are similar in look to nerve cells and they concluded these cells are responsible for detecting **human pheromones**. The human pheromones then transmit a signal to the hypothalamus gland in the brain, sending a chemical message of **sexual attraction** and also appeal.

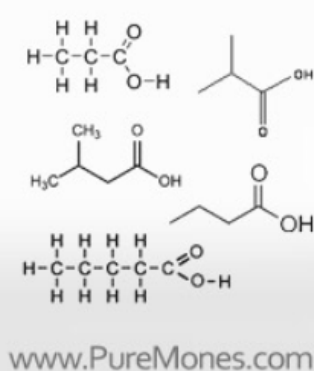

- Human pheromones are believed to be recognized on an instinctive **subconscious level**.
- That means that you do not know that you're receiving them or emitting them, although you are.
- This could be the reason why you are drawn to people that you don't even know.
- Love initially sight?

### There are Many Different Species of Animals Including Humans Which Emit Pheromones

In the animal world, it is very easy to see the amazing power that pheromones have over sexual instincts and arousals. For instance, a bitch "in heat" drives other dogs crazy with virility from miles away along with just their **natural pheromones**. Fantastic sex attractiveness is not it?

*“ The urge in order to have sex is a strong normal instinct and sexual chemicals are what drives those sexual instincts. A few experts also believe that pheromones drive our **social interaction** too. There are many who believe that pheromones also help to make people feel comfortable who are around you and want to be in your presence and concluded that pheromones may not just be purely a sexual attractant and may be also triggers for non-sexual desires to be near a particular person. Keep in mind that warm fuzzy feeling? ”*

## Pure Temptation - Pheromone

### Pure Temptation Pheromones

Pure Temptation is a pheromone additive for women that is intended to seduce men by mimicking the pheromone signature of a sexually-charged ovulating woman. Be the enchanting woman in the room that men can't take their eyes off of. Whether you're out at a bar, party, or club, you too can be the seductress who gets exactly what she wants! Pure temptation is the ultimate aid to spicing up your night with a boost to your sexual confidence that drives men wild.

Pheromones are truly effective at arousing sexual desire in a potential partner, then it's not a strange to believe that pheromones are equally capable of arousing social desires in the same way. Actually, pheromones don't simply attract the opposite sex, it attracts anyone who are stimulated by your own natural unique pheromones. So men may attract girls most of the time, but may also attract other men too. This happen to women too.

- Pheromones tend to be produced by the **human body** and are emitted through our sweat glands.
- Every man and woman produces pheromones.
- However, humans don't produce enough pheromones powerful enough to make us more **sexually attractive** than we are.
- Scientists think that humans have essentially lost the ability to naturally produce adequate amounts of pheromones as a result of development.
- It is also believed that the pheromones humans produce are often destroyed or even overpowered by deodorants and antiperspirants.

Well, most pheromone selling companies out there would have you believe that the solution to the under output of this amazing chemical is to sprinkle or spray upon some **pheromone cologne** they manufacture. So the question is which is it possible to attract men or perhaps ladies simply by dabbing on some pheromone cologne?

My take is actually that every individual is producing their particular natural man pheromones and so attracting different people. In other words, how can it be possible for businesses to produce one sort of **pheromone spray** and claim in which anyone can use them to be sexually attractive?

Did some research from this position as well as found that a lot of, if not all manmade pheromones inside industry are made from pig pheromones (as in oink oink), fake pheromones (so called synthetically engineered) or perhaps real human pheromones extracted from cadavers (dead bodies) Yikes!

So, in order to avoid these scam pheromones, the best way after that is to make your body produce more of your own exclusively unique human pheromones normally. In order for others to be able to respond to the pheromones, they need to be sexually attracted to your very own sex **aphrodisiac** pheromones. This can be achieved by using pheromone releasers and supplements. Generically mass produced pheromones are certainly not unique to be able to your body's chemistry and so they will not work.

It is true that more than time, humans have gradually lost their ability to produce and emit adequate amounts of human pheromones, then it makes perfect sense to correct the issue by boosting your pheromone levels back to where they ought to be. This seems like a more logical approach to solving the problem of exhausted pheromones levels than simply splashing on a few generic pheromones from a jar.

*So if you to be sexually attractive and oozing with sexual intercourse appeal, then it is time for you to start to produce a lot more of your pheromones naturally.*
